TM-1 has landed

We are very proud to present the evolution of MIDI — the TM-1 USB interface is here!

The TM-1 improves the bandwidth between your Machinedrum or Monomachine and popular home computers with up to 10 x the original MIDI speed! The increased speed improves timing and bandwidth.

For example, at 10 x speed, the MIDI clock can be 10 x tighter and 10 x more note data can be passed though at one particular time. All MIDI timing becomes more accurate. This is especially valid for Mac OS X users.

Increasing the bandwidth also makes sample transfers (or OS upgrades!) a much more delightful experience.

You can use any sequencer together with the TM-1. To engage Turbo mode, just Press the Button! MIDI is the universally accepted standard. The turbo protocol is a compatible evolution made possible from improved modern hardware.

That's it for now
